

WoodBeam/SunWalk Panels

TrueDeck is a Canadian made engineered panel designed to be the finished surface for docks, decks, and walkways. Its anti-slip, water / UV resistance, and low-maintenance, make it ideal for virtually any outdoor surface.

Wood wears smooth, and can becoming slippery when wet. It can rot, suffer attack by marine organisms and may support the growth of algae. Walkway planks can sag and warp unevenly, creating a hazard and potential accident. Even expensive hardwood walkways are subject to these problems and will need constant maintenance and replacing periodically.

Renew Resources WoodBeam TrueDeck decking is made up of panels rather than the usual planks, (2' x 4'). Panels are moulded from standard polyester resin, with ultraviolet (UV) resistant additives. These materials are highly durable and will last practically for ever. They are unaffected by salt or fresh water, acids and fuel.

TrueDeck WoodBeam/SunWalk panels weighs less than other decking materials which makes it more manageable when assembling your dock.

Impact resistance is high and the material can deflect repeatedly without deforming permanently. TrueDeck is safe for barefoot walking, unlike wood which can splinter.

56 pcs. Per pallet 20' length**

WoodBeam Panel

The SunWalk panels have a balanced slip resistant pattern of perforations through which 42% sunlight can pass helping to keep vegetation alive beneath the dock, minimizing the effects of your dock on the environment. The perforations also help minimize the effect on your dock from wave and storm surge, they allow water and other liquids to drain through, keeping the walking surface clean, at the same time preventing small items falling into the water if dropped.

Applications

- Docks
- Piers
- Decks
- Patio's & Walkways
- Pools and Spa's
- All area's subject to storm effect or requiring sensitivity to the environment.

TrueDeck Features:

- Wave action resistant
- Corrosion, insect, and Marine Borer resistant
- Impact, Slip, UV and chemical resistant
- High strength & light weight
- Non conductive, non magnetic, non sparking
- Interlocking panels are easy and quick to install
- Minimal expansion and contraction due to temperature change.
- Can be used with metal, wood or aluminium substructures
